## ABBREVIATIONS OF NAMES OF JOURNALS

This list gives the form of references used in MATHEMATICAL REVIEWS and the complete title; the place of publication and other pertinent information are given in parentheses when desirable for clarity. An asterisk indicates that the journal has not previously been listed. A paragraph symbol (§) indicates a bibliographic journal.

- Abacus* Abacus. The Journal of The Mathematical Association of Nigeria. (Benin City)
- Abh. Braunschweig. Wiss. Ges.* Abhandlungen der Braunschweigischen Wissenschaftlichen Gesellschaft. (Göttingen)

# REVIEWS IN GRAPH THEORY

Compiled and Edited by William G. Brown  
McGILL UNIVERSITY  
DEPARTMENT OF MATHEMATICS

This publication is a four-volume compendium of about 9,600 reviews in graph theory published by **Mathematical Reviews** in Volumes 1 through 56, i.e. between 1940 and 1978 inclusive. Reviews were selected from the several sections of **Mathematical Reviews** which were the usual repositories of such items; from the subject lists in **Mathematical Reviews** indexes, where available; and through a systematic perusal of about half of all reviews published by **Mathematical Reviews** during the 39 years under consideration. Every review cited in a selected review was also read, and the process iterated until stable.

A classification scheme containing over 500 categories was developed for the purpose. Every review has been assigned one primary classification and, on the average, one secondary classification. Reviews are reprinted in strict chronological order of **Mathematical Review** numbers in their primary subject area, with a brief citation at each secondary location.

The final volume provides a detailed author index, which can serve as an effective bibliography of the subject.

These volumes are a research tool. They are directed to anyone who has occasion to consult the literature of graph theory: mathematicians, computer scientists, engineers, and management scientists, as well as students, teachers, and practicing researchers.

The potential reader requires no more background than would be required to read papers which are reviewed in the compendium. These vary from highly erudite papers in other areas of mathematics where graph theory is used as a tool to solve specific problems, to elementary descriptive papers which would be understandable to high school students.

A few of the reviews are themselves gems of the mathematical literature. But, for the most part, the reader will use this book as a research tool—to determine what has been done in a particular area of the subject, or to locate known papers when the values of not all parameters are available.

There has been nothing of this scope or magnitude in the subject before. This is the first major bibliography in graph theory which incorporates reviews.

The editor's previous work includes research papers in graph theory and related fields, and many reviews.

## Mathematical Reviews Cumulative Index 1973 - 1979

### VOLUMES 45 THROUGH 58 OF MATHEMATICAL REVIEWS

This massive index, the first cumulative index of Mathematical Reviews containing both author and subject listings, is being prepared from the working files of MR and will index all the reviews in volumes 45 through 58, producing an estimated 700,000 entries representing over 230,000 entries in MR for the period. It will total about 9,200 pages in 12 volumes.

The CUMULATIVE INDEX will have the same form as the Annual Index for 1978 as it is being generated by the same computer program.

The first part, an **Author and Key Index** will be about 5,000 pages. The entries will give full bibliographic information about all items that have been reviewed in MR between January 1973 and December 1979, inclusive. This is about 220,000 entries. In addition, there will be an entry for about 2,500 items not reviewed in MR for which the editors think bibliographic information should be made available. They will be treated exactly as reviewed items, generally with references to *Zentralblatt für Mathematik*, *Reverativnyi Zhurnal*, or other reviewing journals.

Items are listed alphabetically by author; those having several authors are listed in full under each author. Surnames of authors are cross-referenced for name changes or variations of spelling. The original entry for which an erratum or other commentary has been reviewed in a subsequent entry will be identified by an (E).

The author index section is estimated to have about 300,000 entries because of multiple authors.

In the **Author Index** the names of persons associated with an item in a capacity other than that of author, e.g., editor, translator, subject of a biography, are also listed.

The **Key Index** section of the author index will consist of all items for which there is no clear author and will be about 70 percent cross-referenced. Included are proceedings of meetings, tables, obituaries, biographies, etc.

The entries under a given heading (i.e., the author or a title) are listed in order of publication dates. Co-authored items are treated on the same basis as those by the author alone.

The **Subject Index**, to consist of about 380,000 listings on 4,200 pages, will cover all subject areas as classified by MR. For each item there will be one full listing in each subject area in which it has been classified, with all authors, title and MR number, if any. Cross-references will be given under each author after the first to the original listing.

The arrangement of each title entry is that of the heading of the original review in MR. Titles in English, French, German, and Italian are usually given as they appeared in the original. Articles in other languages are given in English translation.
